

FOR IMMEDIATE RELEASE

HEALTHCARE TECHNOLOGY COMPANY COACHCARE ANNOUNCES INTEGRATION WITH THE LEVL DEVICE THIS WEEK AT THE OVERCOMING OBESITY CONFERENCE

CoachCare makes it simple and affordable for clinics to gain 24/7 insight into their patients' lives outside the four walls of the clinic. LEVL's fat metabolism tracking technology provides another way for patients and providers to gain a more complete view into their weight loss programs.

Digital health solution provider CoachCare is announcing their integration with LEVL this week at the Obesity Management conference September 26 - 30 in Washington DC. LEVL is an FDA registered device that allows users to calculate, monitor and track fat metabolism through a single breath.

LEVL's fat loss insights combined with CoachCare's custom-branded patient mobile app, clinical dashboard, and proprietary scales and trackers brings 24/7 insight into a patient's wellness and weight loss journey, while monitoring all aspects of their programs, including fat loss insights, weight fluctuations, water and food intake, steps, sleep, pain and more.

"The CoachCare technology platform ultimately supports better patient outcomes," said Jeff Coulter, CoachCare's Director of Channel and Strategic Partnerships. "LEVL's technology adds another measurable component to our solution for clinics looking to help their patients be more successful with their weight loss programs"

The LEVL device works with any prescribed diet when the body shifts into an elevated fat-burning state. Breath measurements are simple and non-invasive and results are delivered in 15 seconds. Patients can easily track their data through the LEVL iOS or Android app, and now, that information will seamlessly integrate into the CoachCare app and dashboard along with several other patient metrics, to provide a complete picture of the patient's weight loss journey.

"We are excited to integrate our technology into the CoachCare platform. This is a powerful partnership that will allow clinics and patients to better understand the real-time effects of prescribed weight loss plans. Tracking this personalized data alongside other biomarkers allows clinicians to adjust patient weight loss programs as needed to ultimately improve patient outcomes," said Brent Hixson, LEVL CEO.

Both CoachCare and LEVL will be exhibiting at OMA and invite attendees to stop by their booths to learn more about how this integration will be beneficial to both weight loss providers and patients alike.

About CoachCare

CoachCare helps health clinics across a number of specialties improve retention, referrals and revenue by encouraging 24/7 patient-clinic engagement and simplifying daily complexities for both clinic and patient through a custom-branded mobile app, clinical dashboard, and connected proprietary scales and trackers. About LEVL

LEVL has created a new paradigm in nutrition management and health through a non-invasive measurement of ketones using breath. The LEVL device enables clinicians to identify how a prescribed diet and exercise plan impacts their patient's fat metabolism in real-time, enhances patient care by giving clinicians the ability to remotely monitor and keeps patients motivated with daily feedback. All it takes is a simple breath. For more information visit their website [here](#).
